#7163	Available agent not receiving waiting calls
#7178	Transfer notification blocking transfer button on manual transfer actions
#7197	Warm transfer button disappearing after supervisor stops call monitoring during warm transfer

## Highlights

### Ignore workload limit option for voice queues

The queue settings have been enhanced with an option to ignore an agent's workload limit when a call is offered to the queue. This allows for prioritizing specific queues, such as those handling emergency calls, ensuring they are addressed with the highest priority. The option can be found under the "Queue options":

## WhatsApp channel integration

We're excited to introduce WhatsApp as a native communication channel in CC4Teams! Configuration in CC4Teams and interactions through the WhatsApp channel follow the same rules and mechanisms as our existing text channels, such as email. Additional features for the WhatsApp channel will be added in future releases. For more information on how to use the WhatsApp channel, please refer to our updated user guide documentation after the release.

## Application presence syncing enhancements

The application presence syncing has been improved to increase the syncing frequency from 5 seconds to 2 seconds and now includes presence syncing for the contacts list. As a result, tenants using application presence watching no longer require the use of a delegated account.

## Subscription usage and details enhancements

The details of purchased and used subscriptions for a tenant are now visible on the tenant's user list page. This enhancement provides direct insights into the subscriptions currently active, enabling better planning for increased subscription usage. Additionally, the number of assignable subscriptions will be limited to the number of subscriptions in the baseline.

Contract Number: 999  
Contract Renewal Date: 1/1/2030

## Sanitize phone numbers in call destination fields

Phone numbers entered into the various number fields in the CC4Teams client are now automatically "sanitized" to remove any special characters and spaces that are not allowed. This improvement makes it easier for agents to copy and paste phone numbers from other sources directly into the CC4Teams client.

## Email templates for Operators

Email templates have been enhanced to include the ability to create Operator templates. These templates enable operators to quickly send predefined messages to contacts directly from the contact list during an interaction.

### Edit template

Name:

Type:

Content:

Dear colleague,  
A call back request has been received from {customer\_name}, {customer\_contactinfo}.  
Please call the customer back at your earliest convenience.  
Kind regards,  
{agent\_name}
